Origin and Breeding History of the Variety

1. Stardust originated as a mutant of the variety Sparky and was selected in 1966 in Lompoc, California. This was re-selected for three years and the first mass selection was made in 1970. The first crop was grown in 1972. In 1973 this variety was entered in the Fleuroselect trials and was placed on the Novelty Register for a five year period of protection in Europe.
2. The variety is now stable for height and color and has performed very well in trials in the U.S.A. and Europe.
